

CCG Outcomes Indicators

Measure	Description	Month	YTD	Table/Trend	Comments
Emergency admissions for alcohol related liver disease	Measures how many adults (19 years and older) with alcohol related liver disease are admitted to hospital in an emergency. (per 100,000)	Feb-17 1.35	YTD 29.70		Admission rate in February (3 admissions) was lower compare to previous month January (8 admissions), and YTD performance has seen 21% increase than the same periods last year.
Unplanned Hospitalisation for asthma, diabetes and epilepsy in under 19s	Directly age and sex standardised rate of unplanned hospital admissions for asthma, diabetes and epilepsy in under 19s. (per 100,000)	Feb-17 23.08	YTD 266.22		Admission rate in February (15 admissions) and January (15 admissions) remain consistent, however the performance has been increased to 28% comparing 2015/16 and 2016/17, same period.
Emergency admissions for children with lower respiratory tract infections	Directly age and sex standardised rate of children under 19 (0 to 18 years) admitted to hospital with lower respiratory tract infections as an emergency admission (per 100,000)	Feb-17 20.00	YTD 347.76		February's performance of 20.00 is a large improvement on December's 81.55. YTD performance has improved with a 9% reduction in the rate per 100,000 population compared to the previous year.
Maternal Smoking at delivery	Measures the percentage of women who were smokers at the time of delivery, out of the number of maternities.	2016/17 Q2 4.29%	2015/16 Q2 4.59%		During Quarter 2 2016/17, 31 women out of 691 maternities were smokers at the time of delivery. This equates to a rate of 4.29%, which is 0.3 percentage points lower than the same period last year (4.59%). Q3 data not available yet (as at May 2017).
Breast Feeding	Proportion of mothers' who have initiated or not initiated breastfeeding and proportion of infants who have been fully, partially or not all breastfed at 6-8 weeks.	2015/16 Q1 50.4	2014/15 Q1 51.8		Breastfeeding data is no longer made available at CCG level. Data is available at provider level or local authority level. A decision needs to be made whether to continue to report this indicator and at what level.

Measures the number of MRSA bloodstream infections reported per CCG.

Feb-17	2016/17 YTD
0	3
Limit	0

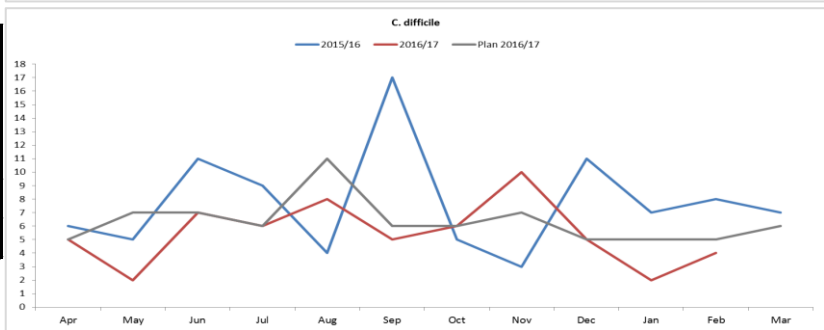

No MRSA case reported in February 2017, however there was one case in January 2017, one in November and one in May 2016. All cases occurred at Epsom & St. Helier.

The count of C. difficile infections reported, in people aged 2 and over, per CCG

Feb-17	2016/17 YTD
4	60
Limit	76
YTD limit
